

Where are gauges available in Jalapeno?

Gauges are available in all Insight tabs.

What type of data can I show in a gauge?

You can use a gauge to present data about most item types in a Jalapeno model.

How do I interpret what the gauge is showing?

The gauge presents the extent to which a single value applies to a population, where

- the population is determined by your selection on the Relation control
- the single value is determined by your selection on the Value and Property controls

Can you show me an example?

In the example shown here, the population consists of the epics related to the selected capability. The gauge shows that 18% (2 out of 11) of the epics have a Funding Range of \$1M - \$5M.
