

How to - Create a capability within Jalapeno

Where do I find capabilities in Jalapeno?

Business capabilities can be found within the Business Architecture module of Jalapeno. After selecting the “View and Model” menu item make sure that you are in the ‘Model’ tab of the Capability model.

How do I add Capabilities to the capability tree?

Capabilities may be added individually or via a bulk import. To better understand how to use and manage trees within Jalapeno, view this [guide](#). To learn how to add and edit items within Jalapeno trees, view this [guide](#). To learn how to import items into Jalapeno grids and manage them in bulk, view this [guide](#).

How do I add additional dimensions to each capability, eg: people, process, information and technology?

When you click on a selected capability within the tree, navigate to the ‘Operating Model Alignment’ sub-tab. Here you will find individual sections on People, Process, Information and Technology. Within each section you can align the capability to other areas of Jalapeno that have already been modelled. To better understand how to use this input page, view this [guide](#). To better understand how to relate existing items within Jalapeno, view this [guide](#).

What are the essential parts of the capability that need to be modelled?

There is very little in Jalapeno that is mandatory. You may model as little or as much as is needed. However, in order for your capability to appear within the relevant Business Unit Console, the Capability must be aligned to the Organizational Unit that owns it.
