

How do I create the metric dials that appear in the Strategy on a Page?

1. Create your objectives, linking them to one or more goals. For guidance on how to create objectives in Jalapeno, please refer to this [guide](#).
2. Create a metric and relate it to the relevant objective. Be sure to select an Operation and a Unit of Measure that is relevant for each metric. For guidance on how to create a metric in Jalapeno, please refer to this [guide](#).
3. Back at the objectives page, select the relevant objective from the objective hierarchy, select the “Model” tab and the “Measure Metrics” sub-tab.
4. From the “Metric” dropdown, select the related metric that you wish to quantify. Enter the “Value” and select whether the value is a Current or a Target value. Select Insert. The entry will be added to the table beneath. Note that the Operation and Unit of Measure you set for the metric is also displayed. You may change these selections on the measure itself by revisiting step 2 and editing your metric.

Where will these metrics appear?

Once refreshed, these metrics will display as gauges on the Strategy on a Page visualization.

The image shows two screenshots from the Jalapeno application. The top screenshot is the 'Measure Metrics' configuration screen. It features a 'Metric' dropdown menu with 'Measure Page (Integer)' selected. Below it, there are input fields for 'Value' and 'Current / Target', and an 'Insert' button. The bottom screenshot is the 'Strategy on a Page' visualization. It displays a hierarchy of objectives and goals. On the left, there are three gauge charts: one for 'Partnered revenue' (29%), one for 'Number of Joint Ventures' (71%), and one for 'Reduce product time to market by 5%' (100%). On the right, there is a table with columns for 'Category', 'Maturity of Sales', and 'Year' (2020, 2021). The table contains several rows of data with colored bars representing progress or status.
