

What are Products in Jalapeno?

Jalapeno allows you to include a product portfolio perspective in the enterprise model.

In Jalapeno, a product is defined as:

A tangible product and/or service which is provided by an organization to satisfy a customer's needs. Create a PRODUCT, to which you can relate PRODUCT FEATURES.

Product features are defined as:

A distinguishing characteristic of a product or service that helps boost its appeal to a potential buyer. PRODUCT FEATURES can be children of PRODUCTS, or an independent reference catalogue that can be used and assembled across many PRODUCTS.

Products may be organized into product families, where a product family is..

A series of different products that form a logical grouping (Source: BIZBOK) Create a PRODUCT FAMILY, to which you can relate PRODUCT children and PRODUCT FEATURES

Products and/or product features may be combined to form an offering which targets the needs of a specific customer segment. To learn more about modelling offerings, view this [guide](#).

To better understand how to create stakeholders, segments and personas, view this [guide](#).

To better understand how to create value propositions, view this [guide](#).

Where can I find products?

Products are found here...

Model Workbench > Architecture > Products and Services > Products

How do I create products?

To create a portfolio of products, navigate to;

Model Workbench > Architecture > Products and Services > Products

Select the tab 'Model'

At the prompt, enter a label (and a description) for the product.

Click the button 'Save' to confirm the action.

How do I relate other items to products?

To relate items to the items in your product portfolio, navigate to;

Model Workbench > Architecture > Products and Services > Products

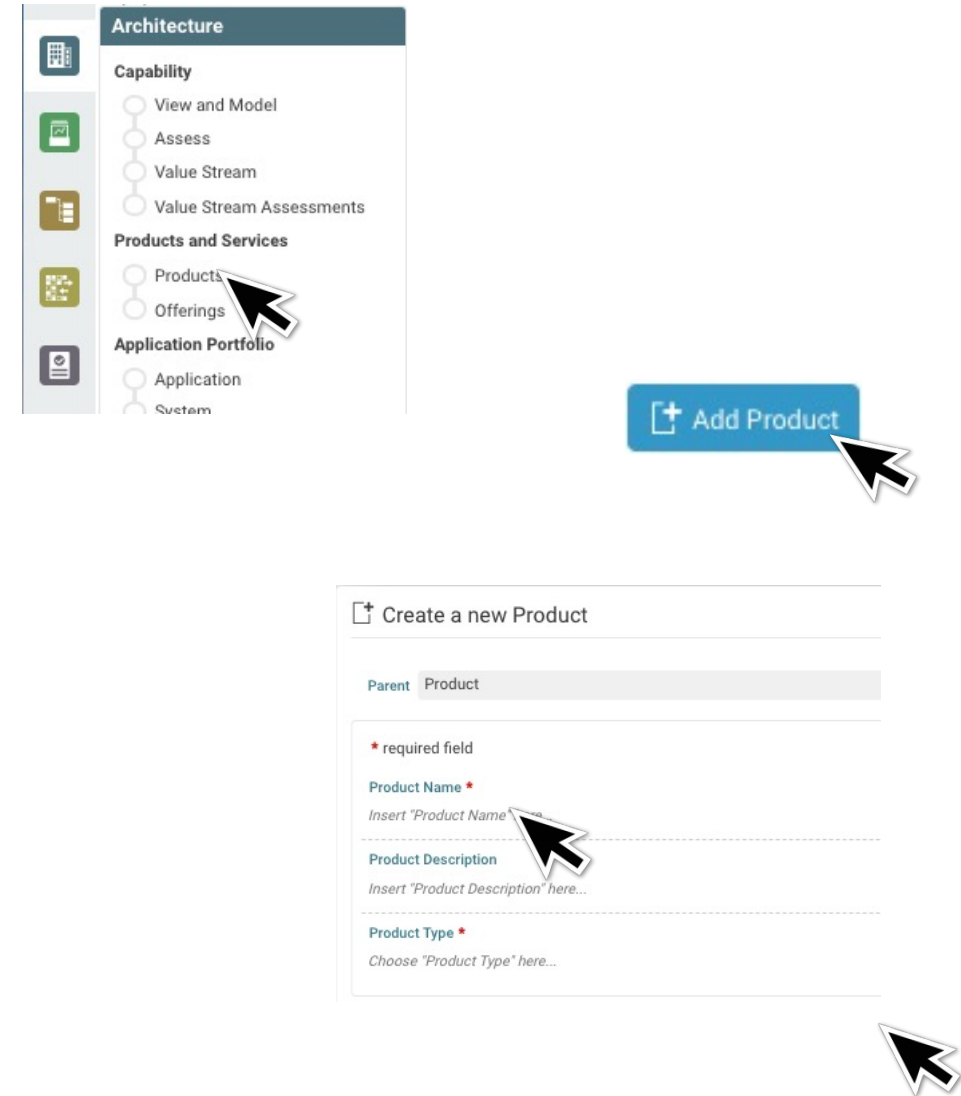

Select the tab 'Model'

Select the sub-tab 'Bulk Export'

In the tree, select the parent of items to be updated

To learn more about working with grids in Jalapeno, view this [guide](#).

Use the columns to relate items to the products / product features (row items).

How can I view my portfolio of products?

Products can be managed as a hierarchy (taxonomy) or as a flat list. For further information about working with tree hierarchies, view this [guide](#).

To view modelled products, navigate to;

Model Workbench > Architecture > Products and Services > Products

Select the tab 'View', sub-tab 'Decomposition Map'

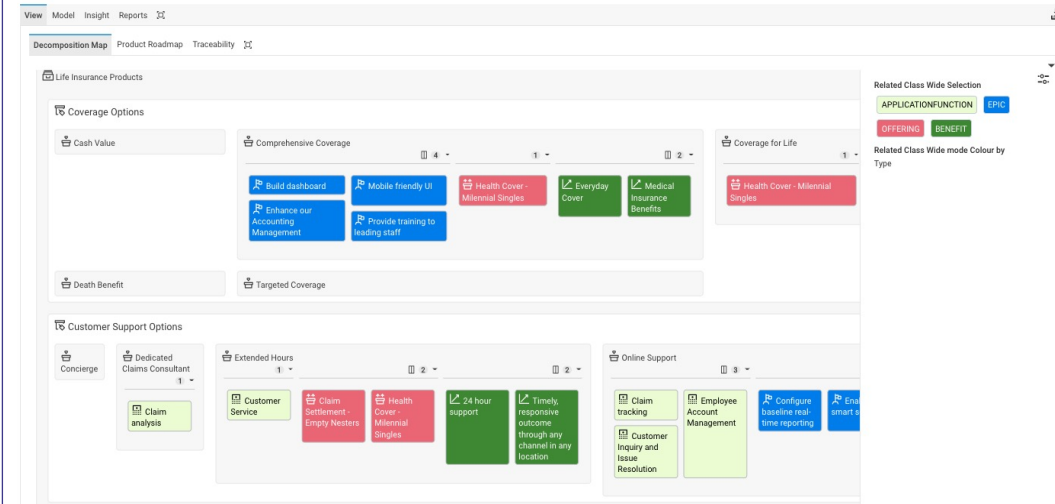

Select an item in the tree which will determine the scope of the tree map displayed on the right.

To learn more about relating items, view this [guide](#).

Use the flyout panel to overlay related items or apply heatmapping to the displayed map. To learn more about using the map flyout, view this [guide](#).

How can I see the detail of a product?

To inspect a product, select it and use the  icon to display the Inspector dialog.

Jalapeno How To - Create a product

How do I create a product roadmap?

Jalapeno allows you to generate a roadmap of planned enhancement of products or product features. The roadmap uses a relationship between products or product features and epics (representing the planned scope of change).

To create a product roadmap, navigate to;

- Model Workbench > Architecture > Products and Services > Products
- In the tree, select the parent of items to be updated
- Select the tab 'Model'
- Select the sub-tab 'Bulk Export'

To learn more about working with grids in Jalapeno, view this [guide](#).

Use the column 'Feature Enhancements' to relate epics to the products / product features (row items).

NOTE: The steps above assume that the epic items have already been modelled. To better understand how to model epics, view this [guide](#).

Where can I view the product roadmap?

To view the product roadmap, navigate to;

- Model Workbench > Architecture > Products and Services > Products
- In the tree, select the parent item which will determine the scope of the roadmap
- Select the tab 'View'
- Select the sub-tab 'Product Roadmap'
